

A major facet of engineering that I am deeply passionate about is the intrinsic aspect of the biomedical engineering field which plays a very important role in shaping conventional medical practice, and my quest for knowledge in this field over the last decade starting with learning from open courseware programs of GIT and presently taking internships in a professor's lab here in Nigeria , is evidence to show the span of my interest in this field. There are so many universities that offer my program, the fact that your university is constantly ranked in the top 10 across different institutional ranking sites endears me to GIT.

Every summer Holiday through my undergraduate program were an avenue for me to deepen my understanding of biomedical innovations such as the robot limb replacement, robotic wheel chair and hearing aids. I understood very early on that my passions lay in this unique field, and my decision to proceed with a graduate course became incipient from this point.

Franklin you have a good introduction here. However, because the first statement is very crucial in every essay, you may want to address the length of this sentence so that the main idea is not lost. Preferably restrict your sentences to a maximum 30 words. In this case, you could break up and restructure the statement as follows "...Medical practice. My quest for knowledge..."

It is always important to find more unique reasons to distinguish a university amongst her competitors. Merely stating that they fare well on rankings is not sufficient reason or atleast doesn't pass as unique enough. Think of hoe many other candidates would state same reason.

D.E.

Your use of the abbreviation 'GIT' in this context is not in order. Typically use full names of institutions or organizations at first mention. You can abbreviate in subsequent mentions. The same feedback applies to your use of "lab" earlier on in this essay.

D.E.

Altogether your formatting for this essay has been done well. Putting this paragraph just beneath a good introductory paragraph set a good tone for the reader to follow through. A good suggestion for the next paragraph could be more subject specific experiences you have had on your undergraduate program.
